***Sold individually**

Description

Why should you buy the Force USA 2.5kg Rubber Coated Olympic Weight?

Whether you are **free weight enthusiast** or **love your plate loaded machines**, the **Force USA® 51mm Olympic Weight Plates** are designed to take a pounding and **give you the ultimate workout**. The internal diameter of 51mm makes them suitable for most modern barbells and plate loaded machines.

Force USA Rubber Coated Olympic Weight Plates are **made for everyday gym use** with their **easy-to-use tri-grip design**. Whether you're training on a smith machine, power cage, squat racks or other free weight exercise movements, changing your plates is effortless as Force USA Rubber Coated Olympic Weight Plates have ergonomic, tri-grip handles **making your training safer and more efficient**. They come with an **integrated steel ring** to provide a smooth and secure fit to all Olympic sized bars and attachments with a 51 mm hole.

The Rubber Coated Olympic Weight Plates have been ergonomically designed in the USA to be easy and safe to handle while looking sharp with **dark grey finishing** and **large display of both lb and kg sizing**.

Made of **one-piece forged construction**, they provide ultimate **safety, quality and peace of mind**. Your Force USA

Rubber Coated Olympic Weight Plates are the best quality with a 'Class A' international rating for both commercial fitness club and home use.

Rubber coated weight plates are superior to hammertone or cast iron weight plates for many reasons, including:

- Rubber coated plates **help reduce noise within your gym**
- Rubber coated plates **protect against damage to the floor or other equipment**
- Rubber coating helps **protect against rust**

Perform your squats, bench press, and any other free-weight exercise **effectively, efficiently and safely** with the Force USA Rubber Coated Olympic Weight Plates.

Specifications:
